

MicroCLAVE®

The only proven system for closed IV access with 600 activations over 7 days

The use of CLAVE® showed an effect in reducing nosocomial Catheter Related Blood Stream Infections in patients at Johns Hopkins University Hospital, Baltimore.

Maragakis, et al (2006) *Infection Control and Hospital Epidemiology*, 27, (1) pp 67-70.

CLAVE® is the only needlefree connector supported by a randomised clinical trial over 11 months, showing a 46% reduction in CRBSI's, and proving a significant reduction in catheter tip and hub colonisation in Cardiac ITU patients.

Bouza, et al (2003) *Journal of Hospital Infection*, 54, pp 279-287.

In an experimental study to assess the barrier effect of 3 market-leading disinfectable needle-less connectors, MicroCLAVE® provided the best protection from the passage of micro-organisms.

Yébenes, et al (2008), *Critical Care Medicine*, 36, (9) pp 2558 – 61.

Available through NHS Supply Chain or from Fannin

NCP CODE	DESCRIPTION	PRODUCT CODE
FSB983	MicroCLAVE® Connector	011-C3300
