

# Biohazard Spill Kits

Clean-up and disinfection of biohazard spillages

Biohazard spills are not only unpleasant to deal with - they can be highly infectious if not cleaned and disposed of correctly. GV Health biohazard spill kits enable specialist and non-specialist or non-trained staff to clean up spillages of blood, urine and vomit safely and effectively.

GV Health biohazard spill kits were jointly developed with the UK NHS to meet the needs of busy staff and are the only biohazard spill kit supplied through the official NHS purchasing channel.

## Wall mounted

GV Health biohazard spill kits are supplied in lightweight, hard-sided high-visibility yellow cases for easy on site storage and portability. Wall mounting brackets can be supplied if required so kits can be kept ready for use in busy areas and high infection risk zones such as accident and emergency departments, laboratories and kitchens.

## Economical and effective

Biohazard spill kits are the most effective way of ensuring availability of the required spill cleaning tools at the point of need. They are also the most economical solution to spill cleaning as they significantly reduce the risk equipment being lost or stolen and are refillable. Refills can be stored centrally and cases refilled after incidents are reported.

## Standards Compliant

All GV Health packs and kits meet the highest standards for cleaning, hygiene and infection prevention specified by the World Health Organisation, the UK Health and Safety Executive and Department of Health. GV Health biohazard spill kits are now available in a number of different case sizes with a range of contents options. Kits include laminated, fully illustrated instructions and incident record sheet.

*This product is supplied on contract to the NHS and may be purchased from NHS Supply Chain. Please see current catalogue or visit [www.supplychain.nhs.uk](http://www.supplychain.nhs.uk). Also available direct from GV Health: call 01920 463098 or email [sales@gvhealth.com](mailto:sales@gvhealth.com)*
